

NEW MSR-11 TEST SEPARATOR FOR MULTIPLE USES

MSR Announces the availability of a new MSR-11 S Stainless Oil-Water separator constructed of solids 304 Stainless Steel for maximum compatibility with process fluids. The MSR-11S is available for rental as a means of confirming the viability of using a coalescing module system in whatever service is being considered and also confirming the information necessary to provide exact sizing to meet the customer's needs.

Use the MSR-11 S to prove that your fluids can be purified at low cost and without the use of consumable filter cartridges or absorbents. It is suitable for testing up to about 10 US gpm depending on the application. MSR will be glad to help with test design.

It can be used in gravity flow or with a positive displacement pump. MSR can provide an air diaphragm system pump if required.

If you purchase a unit from MSR, we will deduct the rental cost from the cost of the unit, so your test is free! Call or email to schedule a test
